Does it have enough Domain End: 1

iframe: 0

mouseover: 0

rightclick: 1

Does it forward you further: 0

Finally we Declare this as a Safe Website

Through the following graph you can compare your report with others

Understand contribution of features to which form such Malicious websites

# Meaning of the Report

We will try to explain what you can infer from the above document

If an IP address is used as an alternative of the domain name in the URL, such as <http://125.98.3.123/fake.html> , users can be sure that someone is trying to steal their personal information. Sometimes, the IP address is even transformed into hexadecimal code as shown in the following link <http://0x58.0xCC.0xCA.0x62/2/paypal.ca/index.html>.

Long URL can hide information therefore length of URL is calculated

Such Websites have less age and usually a closer ending period and most of the time they are missing the domain

Web traffic measures the popularity of the website by determining the number of visitors and the number of pages they visit. However, since phishing websites live for a short period of time, they may not be recognized by the Alexa database (Alexa the Web Information Company., 1996). By reviewing our dataset, we find that in worst scenarios, legitimate websites ranked among the top 100,000. Furthermore, if the domain has no traffic or is not recognized by the Alexa database, it is classified as Phishing.

IFrame is an HTML tag used to display an additional webpage into one that is currently shown. Phishers can make use of the iframe tag and make it invisible i.e. without frame borders. In this regard, phishers make use of the `frameBorder` attribute which causes the browser to render a visual delineation
